		CRITICAL QUESTIONS
C	CONSEQUENCES CONSTISTENCY	<i>What are the consequences of believing this? How consistent is the information?</i>
A	ASSUMPTIONS ACCURACY	<i>What assumption has been made here? How accurate is the data / information?</i>
M	MEANING MAIN POINTS	<i>What is the meaning of this? What is the main point here?</i>
P	PREJUDICE POINT OF VIEW	<i>What prejudice is being shown here? What other points of view could be expressed?</i>
E	EVIDENCE EXAMPLES	<i>What evidence is given to support the claims? What examples are given to back up claims?</i>
R	RELEVANCE RELIABILITY	<i>How relevant are the claims? How reliable is the source, writer, information?</i>

M. Pohl, (1999), *Teaching Complex Thinking* Hawker Brownlow Education.

		CREATIVE QUESTIONS
S	SUBSTITUTE	<i>Substitute a person, object or serve in a different way or role</i>
C	COMBINE	<i>Bring together or unite Blend ideas, materials, situations</i>
A	ADAPT	<i>Adjust to suit another purpose or set of conditions</i>
M	MODIFY, MAGNIFY, MINIFY	<i>Modify attributes, frequency or size. Enlarge to make larger in form or quality Reduce to make smaller , lighter, less frequent</i>
P	PUT TO ANOTHER USE	<i>Use for an alternative purpose, in another situation or in a different way</i>
E	ELIMINATE	<i>Remove or omit a quality, a part or the whole</i>
R	REVERSE REARRANGE	<i>Change order, adjust or create a new sequence, layout or scheme.</i>

Adapted from Eberle (1991) SCAMPER—Games for Imagination Vic: Hawker Brownlow Education

CAMPER IN MUSIC			SCAMPER IN MUSIC		
<p>The following may form the heart of a critical analysis of a known or an unknown piece of music. Note that the order of questioning may not necessarily follow the given sequence.</p> <p>As a result, this structure may best serve as a checklist of the critical questions to be addressed when evaluating the strengths and weaknesses of a given piece of music.</p>			<p>Use the following cues to change / improve an existing composition or arrangement.</p>		
CRITICAL QUESTIONS			CRITICAL QUESTIONS		
C	COMPOSITION	How effective are the compositional devices employed by the composer / arranger?	S	SUBSTITUTE	What else instead? What other Instrument (s) ? Other time signatures? What else? Who else instead?
A	ACCOMPANIMENT	Comment on the type and style of the accompaniment. What would you say about the chord selection?	C	COMBINE	Combine other: <ul style="list-style-type: none"> • harmonies? • rhythms? • melodies?
M	MELODY MOTIFS	In terms of the melody, how appropriate was: <ul style="list-style-type: none"> • the selection of the key? • the construction of the melodic line? <p>What comment would you make about the tonality?</p>	A	ADAPT	What other melodies might fit this context?
P	PLOT PIECE	Comment on the overall plot (or form) of the piece.	M	MODIFY, MAGNIFY, MINIFY	Magnify – What might be added or increased? Minify – What might be reduced or subtracted? Can we modify: <ul style="list-style-type: none"> • Tessitura? • Instrumentation? • Tonality? • Rhythm?
E	EFFECTIVENESS	How might you justify the effectiveness or otherwise, of this as a piece?	P	PERFORMANCE	New or novel ways to perform it? Different instruments, arrangement, orchestration?
R	RHYTHM	Suggest how the use of specific rhythmic devices used by the composer has enhanced or detracted from the overall appear of the piece.	E	ELIMINATE	What may be left out all together? What parts are not required?
			R	REVIEW	Is there anything else that can be done to enhance the piece?

STUDENTS AS QUESTIONERS

If we are serious about encouraging student engagement and student ownership of their own learning, then opportunities for students to be involved in the planning stages of developing learning activities can only serve to encourage such an outcome.

STUDENT GENERATED QUESTIONS

Ideally we want students to generate not just questions, but to come up with questions that are truly worthy of investigation.

Questions that build the knowledge base of students; that seek to engage them in exploring consequences and alternatives and questions that will enrich and take understanding to a deeper level would clearly be worthy of investigation.

Here, the **ICE PRINCIPAL** may be a useful guide for students as they work together to formulate possible questions for inclusion in individual assignments or group research.

ICE PRINCIPLE

Formulate questions that are:

INVESTIGATIVE - i.e. Generate Information about **NOW** and **THEN**

CONSEQUENTIAL - i.e. Explore possible **IMPACT** and **OUTCOMES**

ENRICHING - i.e. Require a **CRITICAL / CREATIVE / CARING** thinking responses.

The bottom line is we as teachers wish to see students creating not just many questions, but many *different* kinds of questions; some which may generate *new* ways of looking at things; perhaps with some questions that will require a good deal of elaboration and those types of questions that will require students to continually shift from convergent to divergent thought processes as a result.

ICE PRINCIPLE

Examples of Question Starters

INVESTIGATIVE

Generating Information about **NOW** and **THEN**

Can we list things ...?	Can we find some examples of ...?
Who's responsible for ...?	What happened when ...?
What events assisted ...?	Why did / didn't ...?
When does ...?	Where could/couldn't one find ...?
What is/was meant by ...?	What happened before/after ...?
How many ...?	Who suggested that ...?
Who was it that ...?	Can you name ...?
What is clearly true ...?	What is clearly false ...?

Hint:

Questions containing "are" and "is" will often assist in generating Investigative type questions. These questions focus on facts and what is already known.

CONSEQUENTIAL

Exploring possible **IMPACT** and **OUTCOMES**

What are some effects of...?	How is this similar to...?
In what ways is this different from...?	What factors contributed to...?
Can this be compared with...?	Can this be simplified by...?
Short-term consequences might be...	Long-term consequences might be...
Who else might have a different view..?	Others might think...
A different perspective might be...	What else needs to be considered...?
Can you group by characteristics such as...?	What questions would you ask of...?

Hint:

A focus on questions that analyse *what could / couldn't happen* or *compare and contrast both like and unlike scenarios* will assist in generating Consequential type questions. These questions focus on what might happen as a result of a given circumstance.

ENRICHING

Require a **CRITICAL / CREATIVE / CARING** thinking responses.

Is there a better solution to...?	Judge the value of...
What is your opinion of...?	How would you have handled...?
Can you defend your position about...?	How many ways can you...?
What changes to ... would you recommend?	Can you see a possible solution to...?
How effective are. ...?	What plan might we adopt to...?
What would happen if ...?	What emotions are stirred when...?
Can you develop a proposal which would...?	How might others feel should... happen...?

What do you think and why will evoke a critical thinking response.

What if questions focus on creative alternatives.

How might you/others feel will engender an affective (caring) response.

Question Chains

It is rarely possible to ask an open ended question without first establishing a closed question. This activity gets students to grow their own question chains and thus create questions that develop depth around a core idea. This helps them understand how knowledge moves from lower to higher order thinking and how we develop robustness in our ideas.

Getting the facts Question Chains
Reasoning Question Chains
Explaining Question Chains
Making decisions Question Chains
Evaluating Question Chains
Maybe it could be different Question Chains

What + When + Where + Who?
What + Why?
Who + Why+ How?
What + Which + Why?
What + Which + Why + How?
What if ...? + How?

<p>Using this technique children can be encouraged to grow mountains of questions, they could even grow mountain ranges of questions around similar ideas. An example of this is shown in the example below.</p>	
<p>Using the <i>Getting the Facts Question Chain</i> children may generate the following questions</p>	<p>What national holidays do you know? When are some of these? Where are they celebrated? Who decides to create this special day?</p>
<p>This may follow up with the <i>Reasoning Question Chain</i></p>	<p>What do New Zealanders usually do to celebrate special days? Why do they do this?</p>
<p>Using the <i>Explaining Question Chain</i></p>	<p>Who then Why then How ⇒ Who decided to create a special day for us? ⇒ Why was it decided? ⇒ How do you make a special holiday?</p>
<p>Using the <i>Making decisions question chains</i></p>	<p>What holidays do we have in New Zealand? ⇒ Which is the best holiday? ⇒ Why is it the best?</p>
<p>Using the <i>Evaluating question chains</i></p>	<p>What is people's opinion of national holidays? ⇒ Why do they like/dislike the day? ⇒ Which opinions/reasons are better? ⇒ Why are they better?</p>
<p>Using the <i>Maybe it could be different question chains</i></p>	<p>What if we didn't celebrate these events with a holiday? How would this affect people?</p>

For younger children it can be worthwhile to make up paper chains with the question words on each link. Students can choose a chain or may be given a chain. There is always the possibility of making up more and even longer chains!!!

QUESTION MAPPING

Question maps create a visual summary and conceptual overview of a topic for investigation

DRAWING YOUR OWN QUESTION MAP

1. The topic for questioning is written in a central box.
2. Key terms related to the topic are written in boxes surrounding the central box. (Generated from a brainstorming process or immersion video/ reading, etc)
3. Directional connectors are drawn from centre to surrounding boxes.
4. Words are added to connectors so that a statement is made starting with the central word and ending with the outside word each time.
5. Question starters such as Why? and How? are recorded above each statement made on the map.
6. Suitable challenging questions for research are then created.

M Pohl (2005) *Lift-off to learning!*. Hawker Brownlow Education. Melbourne, Victoria

RYAN'S THINKERS KEYS

Thinker's Keys are a set of twenty different activities designed to motivate and engage students in a wide range of thinking tasks. Whilst they have been in use for more than two decades, they still endure as a valuable teaching and learning tool for today's classrooms
A summary of the original twenty keys appears below:

The Thinkers Keys	
	
The Reverse	Places words such as 'cannot', 'never' and 'would not' in sentences, which are commonly displayed in a listing format.
The What If	You can ask virtually any 'What If' question (serious or frivolous). Students can record thinking on a graphic organiser.
The Alphabet	Students compile a list of words from A to Z which have some relevance to a given category which features in an area of study.
The BAR	The acronym- BAR - can be used to improve the design of everyday objects. B = Bigger A = Add R = Remove or Replace
The Construction	Problem-solving requiring the creative use of limited quantities of everyday materials.
The Disadvantages	Here, students choose an object or a practice, and list a number of its disadvantages. Then they list some ways of correcting or eliminating these disadvantages.
Different Uses	Students put their imaginations to work as they list some widely different uses for a chosen object from an area of study.
The Prediction	Students think critically as they predict possible outcomes to a set of given circumstances or a particular situation.
The Picture	A simple diagram / graphic, which has no obvious relevance to the area of study, is presented and the students then try to work out ways in which it could be linked with that area of study.
The Ridiculous	Make a ridiculous statement that would virtually be impossible to implement and then have the students attempt to substantiate it.
The Commonality	Select two objects with little to do with each other and ask students to find points of commonality.
The Inventions	Students are encouraged to develop inventions which are constructed in an unusual manner or using unusual materials
The Alternatives	Students list ways in which to complete a task without using the normal tools or implements.
The Question	Start with the answer, and try to list 5 questions, which could be linked with that answer only.
The Brainstorming	State a problem and have students brainstorm a list of solutions.
Forced Relationship	Students develop a solution to a problem by considering the attributes of a number of dissimilar objects.
The Combination	Students list the attributes of two unmatched objects, then combine the attributes to create a new or better product.
Interpretation	Describe an unusual situation and then ask students to think of some different explanations for the existence of that situation.
The Brick Wall	Make a statement which could not generally be questioned or disputed, and then try to break down the wall by finding other ways of dealing with the situation.
The Variations	Students find many ways to overcome an obstacle or solve a problem.

Flintstone's Spelling Contract

Each week you need to complete the activities below for your spelling words. You may not use the same word for a particular activity in question.

1. Copy your list words into your spelling book.
2. Write each word in a sentence.
3. Each sentence must be longer than 6 words.
4. Select **four** of the following activities.

Try a different combination of activities each week.

The Reverse	Choose a list word and use it to write a reverse key. (For example – if your word was ladder write 5 things you could never do with a ladder.) Your reverse key must contain 'cannot', 'never', or 'would not'.)
What if?	Select a word and write 5 'What If' questions for it. (For example – if your word was fuel you could write, "What if fuel prices doubled tomorrow?")
The Disadvantages	Choose a noun from your list and write all the disadvantages that you can find.
The BAR	Choose a noun from your list and use BAR to improve the design or use of the object.
The Alphabet	Select a word and compile a list of words from A - Z that relate to it.
The Picture	Draw a small picture of anything at all. Select a list word you haven't used and find as many links between it and your picture as possible.
The Combination	Combine parts all whole words from your list to make new words.
The Commonality	Find 2 words in your list that you think have little in common. Now find as many shared properties for them as you can.
The Question	Choose a list word and write 5 questions that could only have this word as the answer.

Find a partner and have a practice spelling test.

NEW KEYS AND KEYS WITH NEW USES

THE QUESTION KEY:

Brainstorm the most important possible question for your unit of work. It must be a question that would challenge everyone to think really deeply.

THE MATRIX KEY:

This Key encourages the most amazing and different new products. Place the names of some things down the side of the page and then place other names of objects along the top. Then create new objects by combining one thing from the side list with one from the top list.

THE GRAPHICS KEY:

Instead of listing your information and ideas down the page in the normal boring way, use a graphic organizer to display your thinking on a specific issue.

THE THREE WHYS KEY:

Make a statement, then ask "Why is that?" and write your response below the statement. After that, ask "Why is that?" about that 2nd statement. When you give your answer, ask another "Why is that?" about the 3rd statement.

THE DECISION KEY:

Use this key to develop some criteria (reasons or guidelines) for making your choice in decision-making.

THE INFO KEY:

With this Key, you organize information according to specific headings. These headings could include A to Z; Biggest to smallest; Most to least expensive, etc.

THE RUBRICS KEY:

With this Key, you work out the quality standards for the work - e.g. a project.

THE ACTION KEY:

With this Key, you clearly write out the steps you need to take in order to finish the task.

PERSONAL KEY:

This key allows you to tell your own personal thoughts and feelings about an idea or issue.

RIPPLE KEY:

This key allows you to suggest small actions that may have far-reaching effects.

THINKER'S KEYS Theme / Topic _____ Year 7 Chemistry

The Reverse	The What If ?	The Disadvantages	The Combination	The Alphabet
List 10 things that cannot be separated using scientific separation methods.	What if... gasses no longer existed? Use a consequence wheel to show some outcomes.	What are some disadvantages of Chromatography?	List attributes of conductors and insulators. Combine some of these to make a better product.	Create an A-Z for words to do chemical reactions.
The B.A.R.	The Variations	The Picture	The Prediction	The Different Uses
Improve the efficiency of a refrigerator using the BAR technique	List a variety of ways of separating mixtures.	How does this relate to Chemistry? 	Describe materials used to conduct heat and electricity the year 2050.	Find 10 different uses for filter paper.
The Ridiculous	The Commonality	The Question	The Brainstorming	The Inventions
Magnetic Separation should be the only form used. Justify this statement.	Find similarities between expansion and compression.	The answer is MATTER. Provide 5 questions .	List 20 things you would find in nature under the headings of solids, liquids and gasses.	Design a machine that separates mixtures.
The Interpretation	The Brick Wall	The Construction	The Forced Relationship	The Alternative
Suggest why a block of ice in a furnace set at 1000 degrees Celsius is not melting. .	Suggest some alternatives to classifying things according to their states (solid, liquid, gas).	Make a model of a filter using 2 straws, 4 ice cream sticks and a piece of cardboard.	How might you melt a large block of ice using only a feather, a cricket bat and a piece of carpet.	Suggest ways to condense a gas into a liquid.
